In the Abstract on page 21, in line 13, delete, "detecting means" and insert, -detector-.

The following is an examiner's statement of reasons for allowance: Claims 1-20 are allowed as the prior art, specifically Ohno (US 4,429,261) and Yoshino et al, (US 4,497,459), do not teach or suggest the applicant's invention. Claim 1 teaches a servo writer for a tape. The distinguishing elements of the claim teach a pay-offside motor paying off the tape from the pay-off reel by rotating the pay-off reel; a winding side motor winding the tape on the winding reel by rotating the winding reel; a first capstan roller and second capstan roller which are provided at the upstream side and down stream side of a write head, respectively, and by rotating the capstan rollers, run the tape in a state pinched between respective pinch rollers and the capstan rollers; a first tension detecting means which is provided between the first capstan roller and the second capstan roller and detects running tape tension; and a capstan roller controlling unit controlling a rotation speed of the first capstan roller and the second capstan roller so that tension detected by the first tension detecting means becomes constant, wherein the capstan roller controlling unit has a low
